

### Practical Task 1.2

To demonstrate that you have been able to provide significant help to your peers throughout this unit, you need to collect and later present evidence of your assistance. You can assist other students in a number of ways:

- Create a visualization, animation, or other means of clearly communicating a concept from the unit. This would need to be insightful and helpful to others who are learning the concept.
- I completed these visualizations for this Task 1.2. And can assist with others.

## Linked Lists

- I go over and explain to my classmates the concepts of bubble sorting and linked lists as they relate to our module. I have also included supporting Evidence document.
